

# Job Post// Data Science Manager

## Intro

We are looking for a Data Science Manager. In this role, you will lead the day-to-day execution of a client project. You'll work directly with clients and you'll take ownership of the overall project and its end products. You'll make a contribution to the analysis, planning, and implementation of approaches, working with our data scientists to ensure the timely and cost-effective delivery of solutions and sustainable results.

As a Data Science Manager, you have a keen eye for pitfalls in complex projects. You know how to deal with setbacks, without compromising on planning, costs, or quality. You coordinate workstreams and manage administrative aspects of the project. You work closely with others but also autonomously. Your conceptual thinking skills and communication skills will ensure successful client projects and team performance.

Project management typically includes gathering and analyzing information, and developing recommendations for presentation to client management. You'll support the partners in deal reviews and update BD databases. Ultimately, you'll implement those recommendations with client team members.

## Who we are

acmetric is a boutique data science consultancy that was founded two years ago by a small group of scientists and industry professionals who shared a passion for the intersection of business and data. Since then, we have grown to a team of 20 professionals who are united by a mindset that values creativity, curiosity, and a drive to innovate.

Our team includes individuals from diverse academic backgrounds, from business to data science. We take pride in our non-hierarchical setup, where every voice is valued and heard. Our startup culture encourages collaboration, and we believe in working together to build the acmetric of tomorrow. We see ourselves as a team of entrepreneurs, all working towards a common goal: to provide our clients with the best possible data-driven solutions.

Our experience in sectors like retail, mobility, and banking/insurance, combined with our expertise in analytics, machine learning, and artificial intelligence, means we turn data into magic. We achieve this by combining strategy, deep methodological understanding, and state-of-the-art tooling. We don't just provide solutions; we train teams throughout organizations so that data becomes a part of our clients' DNA.

At acmetric, we have a strong performance culture. Our ambition is to become Europe's leading data science consultancy. We believe in rewarding those who go above and beyond to help us achieve our goals and have a rich bonus structure to back it up. Our ambitions to grow further mean that there are ample opportunities for career advancement for those who share our values.

We are proud of our diverse nationalities and backgrounds, and whether working from our office in Amsterdam or remotely, we are driven by a shared eagerness to achieve what is needed. Together, we strive to make a difference for our clients and ourselves.

## About the role

In this role, you have adequate knowledge of the tools and techniques needed to execute data science projects efficiently and cost-effectively. You feel confident about econometrics & statistics, experimentation, coding and machine learning. You have a deep understanding of business acumen and understand the importance of communicating effectively.

In addition to planning, organizing, delegating, influencing, and leading the project, responsibilities include:

- Defining the structure of a project, its goals, and resource requirements
  - Applying theoretical, managerial, and technical skills to fulfill identified objectives and deliverables
  - Ensuring the scope and schedule of projects are achievable within the given time and budget
  - Implementing a solid project management approach for task interdependence
- Managing project risks, contingency, and mitigation plans
  - Consulting issues associated with a project with the project team and clients
  - Undertaking periodic reviews to make sure that projects are on track
- Maintaining high team performance and productivity
  - Allocating tasks to the project team
  - Providing regular guidance to team members
- Updating project documentation on a consistent basis and conveying them to the management
- Developing and keeping positive relationships with clients
  - Getting familiar with the client's business environment, in order to lead projects effectively
  - Coordinating with relevant stakeholders, both inside and outside the organization

## Qualifications

- Hold an academic degree in a relevant field (e.g. business administration and data science).
- Have a minimum of 4 years experience in project management;
- Demonstrated experience in a professional, project-oriented organizational environment.
- Exhibit strong communication, interpersonal, and organizational skills.
- Strong interpersonal and teamwork abilities, with a proven talent for building and leading successful teams to achieve common goals.
- Proficient in both written and spoken English for effective collaboration.
- Demonstrated capability to take ownership of administrative processes and manage the budget for the assigned account, ensuring financial accountability and efficiency.
- Based in the Netherlands and available to work 1-2 days per week from our Amsterdam office.

## What we offer

- An opportunity to work at the forefront of data science, machine learning, and AI, contributing to innovative and impactful projects.

- Joining an ambitious startup that is deeply committed to strategy, data, and academic research, creating a dynamic and intellectually stimulating work environment.
- Support and opportunities for advancing your professional and personal growth, allowing you to expand your skill set and career.
- Competitive compensation, with your salary tailored to your qualifications and expertise.
- Additional benefits, including the flexibility to work from home, and allowances for travel and mobile expenses.
- An informal and creative work environment that fosters initiative and encourages the exploration of new ideas, contributing to a vibrant and collaborative workspace.

## Interview process

The interview process consists of four rounds:

- General interview;
- Technical interview;
- Business/management interview;
- Culture fit interview.
